### EXPEDITION MORNING IN HYATT FJORD

This morning we are in true “Expedition Mode” as this is a new destination for the ship and for Noble Caledonia. Our wonderful Chilean pilots, who know the area well, have suggested this plan. We appreciate your understanding, flexibility and sense of adventure.

### ZODIAC CRUISE TO SEE WHAT WE CAN FIND!

(weather conditions permitting)

**0830** PORT side (odd-numbered cabins)

**1000** STARBOARD side (even-numbered cabins)

**1200** *Ms Island Sky* sets sail for Puerto Natales.

**1200** Join the **Expedition Team out on Deck 4 for an eBird survey** as part of our Citizen Science Program. Bring your binoculars!

**1430** Please join **Grant** in the Lounge for: “**Phone Photography**”. Bring along your smartphones and join Expedition team member Grant for an interactive phone photography talk, which will help you to take better photos with your phone.

**1530** Come and join **Wendy on the Lido Deck for “Shipilates”**, a 30 minute session of breathing, stretching and strengthening exercises done from a seated position. Bring your stripy towel please.

**1700** Please join **Kevin in the Lounge for: “Coastal Birds of Chile”**. A look at a range of birds to be encountered as we sail on our on our journey through the Chilean fjords, from cormorants to steamer ducks, kelp geese to oystercatchers, and even the chance of an Andean Condor overhead.

**1900** **Recap and Briefing** with the Expedition Team in the Lounge.

**After Dinner (about 2115)** come and join **Conrad** in the Club for a fun **Music Quiz from the 60s & 70s TV series music**. Prizes to be won!

## Alberto De Agostini National Park

This park is located south of Punta Arenas and west of Puerto Williams. It covers an area of 1,460,000 hectares that extends through 3 provinces of the XII Region: Magallanes, Tierra del Fuego, and Chilean Antarctica.

It is located 80 nautical miles southeast of Punta Arenas, and the navigation between Punta Arenas and Puerto Williams passes through the Beagle Channel, which is part of the park. Another way to get to the park is by air from Punta Arenas to Puerto Williams and then continue by sea.

The name of the park is associated with the Salesian priest Alberto De Agostini who in 1910 undertook the mission of exploring the channels of the Fuegian archipelago. Agostini was a mountaineer, excellent explorer, documentary filmmaker and draftsman of the Cordillera de Tierra del Fuego. He explored the island of Tierra del Fuego for three decades, generating the largest number of photographic and cartographic records that had been until that moment in the south of Patagonia. Through the work of Agostini, Patagonia became known in much of the world.

As for the fauna, species such as the culpeo fox, chilla fox, leopard seal, dolphins, whales, sea lions, elephant seal, southern dolphin, and Chilean dolphin, in addition to 49 species of birds, both terrestrial and marine can be found.
